Download the archive file and extract the contents. After this, you can get Barrier from the following places: Manual installation: Download the application to your computer, extract the archive and run the setup executable. Then, press Next and Finish. .msi installer: The program has a manual installer that runs from the Windows folder on your computer. We'll focus on the manual installation, which is the easiest way to install Barrier. In this case, you can unpack the archive to your desktop. There are many files in the archive, but only a few are important to install Barrier. The setup file is the first one, so you should execute it. Start the install file and follow the instructions. When you're done, hit Next and Finish. This will install Barrier on your computer. Using Barrier Go to the program's Start menu or to the Barrier folder in the Start menu. You should now be able to see a new shortcut there. Then, just double-click on the shortcut and you'll be all set. From now on, you should be able to start controlling any of the computers connected to your Barrier. Configuration You can use Barrier to control multiple computers and it will adapt to them. However, you can also establish hotkeys that will allow you to access the other computers. First of all, open the program's Options menu and select the Hotkeys tab. Then, you need to configure some hotkeys that you can use to switch desktops. This might be more complicated than it seems, but there are some useful tools that will help you create the hotkeys you need. For example, you can use the Tool tab and the Reorder dialog to rearrange the keys. Once you have done that, click on the Edit button on the left of the dialog and the keys will be updated. You can use a hotkey, any of the other computers or even an external mouse to switch desktops. You can configure each of them to act as a hotkey. This might not be
